Portable Tub and Alley System

The Stur-D portable tub and alley system has set the standard of excellence for over twenty years. The tub has an outside radius of approximately 9 ft. and there are two styles available: the Alley-Only model and the Squeeze Chute model. Each alley features an adjustable width from 16 inches up to 32 inches, along with a palpation door and alley back stop. Both the tub and the adjustable side of the alley have a full-length, extra-wide catwalk for operator safety and convenience.

Loading Chute

The Stur-D 14 ft. loading chute is the heaviest-built loading chute available today. We use a 6000 lb. torsion axle with heavy-duty 16-inch rims and 10-ply tires to give this loading chute the capacity to stand up to the roughest of roads and pastures, even while hauling up to 20 panels.

Stationary Tub

Stationary Equipment

While the Stur-D stationary components were the inspiration for our Porta-Tub system, they remain a constant in our product line, providing flexibility for your individual needs. Components can be set up in a variety of configurations

with several load-out options, and the tub is available in two sizes with three alley lengths to choose from.
